ANCHAL JANGIR
(6620 ,22049867)**

ACKNOWLEDGEMENT

I take this opportunity to express my sincere gratitude to all those who have supported me directly or indirectly in the successful completion of my project titled “**GLAM STUDIO**”. This project has been a valuable part of my academic learning, allowing me to understand the real-world application of technology in business management, particularly in the salon and beauty service industry.

First and foremost, I would like to convey my heartfelt thanks to our respected **Principal**, for providing us with the opportunity and resources to pursue this project. Their constant encouragement and support toward student innovation and practical learning have been truly motivating.

I would also like to extend my deep gratitude to the **Head of Department, Indu Arora**, Department of BCA (Bachelor of Computer Application), for their valuable guidance, timely assistance, and constructive feedback throughout the course of this project. Their insights helped me maintain a structured and focused approach to problem-solving and development.

My special thanks to my project mentor and guide, **Dr. Navdeep Kaur, Professor Ritu Paran** whose dedicated supervision, technical guidance, and continuous encouragement made this project both a learning experience and a success. Their detailed suggestions and in-depth knowledge were crucial in shaping the design and functionality of the Salon Management System.

I am also extremely thankful to all the **faculty members of the BCA**, who have supported and inspired me with their words of motivation and academic wisdom during this journey.

I would also like to extend a special note of appreciation to my **project team member** for their collaboration, teamwork, and shared dedication. Every brainstorming session, coding hurdle, and testing phase we worked through together was a testament to our team spirit and commitment to excellence.

I express my gratitude to the **salon staff and management** who provided real-world input, helping me better understand the daily operations and specific needs of the salon business, which were vital in shaping the practical aspects of this system.

Lastly, I thank my **family and friends** for their endless support, motivation, and patience throughout the project period. Their encouragement played a significant role in helping me stay committed to completing this work with diligence and passion.

This project would not have been possible without the combined efforts of all these individuals, and I am truly grateful for their involvement.

Introduction

Salons are expected to provide not just excellent services but also a seamless and expert client experience in the fast-paced and cutthroat beauty market of today. Manual scheduling, handwritten invoices, and disorganized client data are common in traditional salon operations, which can result in errors and inefficiency. We are creating a desktop program called "**Glam Studio – Salon Management System**" in order to address these issues and improve administration in general.

GOAL:

The goal of Glam Studio is to provide salon businesses with a comprehensive management solution. It focuses on streamlining routine salon tasks including scheduling appointments, keeping track of client information, providing services, monitoring staff activity, controlling product sales, and keeping supplies on hand for services. While administrators (admins) have specific access rights to update and alter service details, staff records, and product inventory, receptionists will use the application for the majority of daily duties.

The goal of this system is to digitize salon workflows, minimize human error, and guarantee correct and efficient execution of all tasks. Glam Studio helps increase customer satisfaction by centralizing all salon-related data, which facilitates easier billing, quicker service, and better record-keeping.

PURPOSE:

Eliminating manual salon operations and lowering the possibility of human error are the goals of the GLAM STUDIO salon management system.

Its aims to:

- Improve the general client experience by providing effective service.
- Spend as little time as possible on administrative duties.
- Boost data accuracy and documentation.
- Help the salon's management keep an eye on profitability and performance.
- Encourage scalability as the salon expands or opens more locations.

OBJECTIVE:

- Keep thorough records of your clients and services.
- Organize employee schedules and information.
- Effectively arrange services, costs, and time.
- Keep tabs on product usage and inventory levels.
- Manage the processing of payments, invoices, and billing.
- Produce business reports for planning and analysis.
- Provide a straightforward and easy-to-use interface.

LIMITATION:

- It is challenging to view previous appointments and services during subsequent visits because the system does not keep track of a client's service history.
- There isn't an integrated notification system to inform employees of low product inventory or remind customers about upcoming appointments.
- There is no module for reviews or customer feedback.

Names of Modules to be covered

GLAM STUDIO DASHBOARD

- HOME: Generating Bill according to the services selected by a client.
- CLIENTS: In this page we are inserting the details of clients and if we want to update and delete their details, we can do that too.
- EMPLOYEES: In this page we are inserting the details of employees with their salary and department and if we want to update and delete their details, we can do that too.
- SERVICES: In this page we can insert new salon services and can make the changes in the services.
- SHOP: The products we are using in the salon the client can buy it.
- ITEMS: We can make changes in the list of products we are selling.
- RECORDS: In this page you can see your income and how much profit you get according to the month and year.
- EXPENSES: This is a page where you insert all the products you are using in your salon with their quantity and total amount.

1. HOME PAGE

- This is the **central module** used for **generating bills** based on the services selected by a client.
- It **calculates the total cost** dynamically depending on the services availed.
- Links with **CLIENTS** and **SERVICES** modules to retrieve service selections and client data.
- Plays a key role in **tracking income** and updating it to the **RECORDS** module.

2. CLIENTS

- Allows the **insertion, updating, and deletion** of client records.
- Stores **personal details** like name, contact, service history, and total amount.
- Enables client identification via **Client ID** or name for quicker service.
- Enhances **customer relationship management** by keeping service logs.

3. EMPLOYEES

- Enables **adding, updating, and removing** employee details.
- Maintains information like **name, role, department, and salary..**
- Salary information can be utilized in **EXPENSES** calculations.

4. SERVICES

- This module manages the **list of services such as waxing, hair treatment and so on** offered by the salon.
- Supports **adding new services**, editing prices, descriptions.
- Services are selected in the HOME module for bill generation.
- Keeps the service offerings **updated and relevant**.

5. SHOP

- Represents the **point-of-sale system** for selling products to clients.
- Clients can buy **salon-used or branded items** directly.
- Integrates with **ITEMS** for inventory.

6. ITEMS

- Allows admins to **add, edit, or delete products** used or sold in the salon.
- Includes details such as product name, price and description.
- Connects with SHOP and EXPENSES to update inventory levels and costs.
- Ensures all available products are listed for both usage and sales.
- Keeps stock updated for smooth retail and service operations.

7. RECORDS

- Displays **income, expenses, and profits** categorized monthly or yearly.
- Collects data from HOME (income), SHOP (sales), and EXPENSES (costs).
- Crucial for tracking financial health and making pricing decisions.

8. EXPENSES

- Maintains a list of all **purchased or consumed items** in the salon.
- Details include **item name, quantity used, unit cost, and total amount**.
- Helps in monitoring **monthly/yearly expenses**.
- Impacts profit calculation in the RECORDS module.
- Useful for inventory audits and budget planning.

DFD/ER/Pictorial diagrams

Database Design for Glam Studio

This design includes tables for

- Client
- Employee
- Shop
- Income
- Expense
- Services

1. Client Table:

services expense client income shop employee			
	Field Name	Data Type	
🔑	ClientID	Number	Unique client Identifier
	First_Name	Text	Client's first name
	Last_Name	Text	Client's last name
	Email	Text	Client's email
	Phone_Number	Number	Client's phone number
	Address	Text	Client's address
	Pre_Services	Text	Clients's previous services
	Total_Price	Number	Client's previous services total amount

It store the details of the clients.

2. Employee Table:

services expense client income shop employee			
	Field Name	Data Type	
🔑	EmpID	Number	Employee's ID
	First_Name	Text	Employee's first name
	Last_Name	Text	Employee's last name
	Department	Text	Employee's department
	Salary	Number	Employee's salary
	Email	Text	Employee's email address
	Phone_Number	Number	Employee's phone number
	Address	Text	Employee's address

It store the details of the employees.

3. Shop Table:

services				expense		client		income		shop		employee	
Field Name		Data Type											
🔑	ItemID	Number		Unique ID for every product salon sell									
	Item_Name	Text		Name of th product									
	Item_Price	Number		How muchh that product cost									

It store the details of the products.

4. Income Table:

services				expense				client				income				shop				employee															
Field Name												Data Type																							
Income_ID												Number												Unique identifier											
Income												Number												Total amount of any purchase											
Type												Text												To identify it is a service or a product pruchase											
Date												Date/Time												Date of the income											
Month												Number												Month of the income											
Year												Number												Year of the income											

It store the income as per date, month and year.

5. Expense Table:

services		expense		client		income		shop		employee	
Field Name		Data Type									
	ID	Number		Unique identifier							
	Expense	Text		Name of products we use in salon							
	Price	Number		Price of single product							
	Quantity	Number		How many Products salon have got							
	Total_Amount	Number		Total price as per quantity							
	Date	Date/Time		Date of the product it got acquired at salon							
	Month	Number		Month of the product it got acquired at salon							
	Year	Number		Year of the product it got acquired a t sason							
											

It store the expenses as per date, month and year.

6. Services Table:

 services  expense  client  income  shop  employee			
	Field Name	Data Type	
	ServiceID	Number	ID for every service salon provides
	Service_Name	Text	Name of the service
	Price	Number	Price of every service

It stores the details of the services.

Screen Design of all the forms

1. Login in Page:

The screenshot shows a web browser window titled "Form1". The page is split into two main sections. On the left is a large image of a woman with dark hair, holding a green tube of "SANORI SKIN" product over her eye. On the right is a light green rectangular box containing the login form. The form has two input fields: "USERNAME" with the text "admin" and "PASSWORD" with the text "12345". Below these fields are two buttons: "GO IN" and "CHANGE PASS".

2. Dashboard:

3. Clients Page:

ClientID	First_Name	Last_Name
101	Pooja	Sharma
102	Kashish	Goyal
103	Neha	Sharma
104	Leela	Kumari
105	Nisha	Kumari
106	Kannu	Verna
107	Jiya	Patel
108	Ritika	Ahuja
109	Shivani	Sharma
110	Kusum	Verna
111	Bhavna	Choudhary
112	Devi	Chopra
113	Aditi	Goyal
114	Diya	Verna

This form is design to collect and manage the information about client such as their name, email, phone number and address and store it into database.

4. Home Page:

ClientID	First_Name
123	Nidhi

Service	Price
Cleanup	₹400
Gold facial	₹1200
Thai massage	₹3000

This form is designed to generate the total amount(bill) for the client after selecting the services they want to get.

5. Employees Page:

The 'employeepage' form includes the following fields:

- EMP ID: 101
- FIRST NAME: Susan
- LAST NAME: Connor
- DEPARTMENT: Core services
- SALARY: 9000
- EMAIL: susan@gmail.com
- PHONE NUMBER: 551144889
- ADDRESS: Mohali

Buttons: INSERT, UPDATE, DELETE

Table of Employees:

EmpID	First_Name	Last_Name	D
101	Susan	Connor	Co
102	Noah	Roger	Ha
103	Vimla	Devi	Sp
104	Myra	Verma	Ma
105	Aditi	Goyal	Na
106	Isha	Goyal	Ha
107	Kartik	Kumar	Ma
108	Kashvi	Jain	Na
109	Indira	Sharma	Co
110	Kavya	Kumari	Co

This form is design to collect and manage the information about employees such as their name, department, salary, email, phone number and address and store it into database.

6. Services Page:

The 'services' form includes the following fields:

- SERVICE: 102
- SERVICE N: Amwax
- PRIC: 300

Buttons: INSERT, UPDAT E, DELET E

Table of Services:

ServiceID	Service_Name	Price
102	Amwax	300
103	Legs wax	500
104	Full bodywax	1000
105	Underarm wax	100
106	Eyebrows	50
107	Upper lips	50
108	Herbal bleach	700
109	Gold bleach	800
110	Cleanup	400
111	Classic facial	1100
112	Gold facial	1200
113	Thai massage	3000
114	Herbal wrap	4000
115	Hydrating wrap	3500
116	Haircut	550
117	Hairwash	250

This form is design to store and manage the services that salon provides. This form store service name also how much that service cost and store it into database.

7. Shop Page:

shop

HOME CLIENTS EMPLOYEES SERVICES SHOP ITEMS RECORDS EXPENSES

Shop our fav

You Glow Girl

 Shampoo
 Conditioner

Vit.E serum - ₹500
 Mineral sunscreen - ₹350
 Shampoo - ₹450
 Conditioner - ₹450

₹1750.00

TOTAL COST

ADD DELETE CLEAR

This form is designed to generate the total amount(bill) for the client after selecting the products they want to get.

8. Items Page:

items

HOME CLIENTS EMPLOYEES SERVICES SHOP ITEMS RECORDS EXPENSES

ITEM 113

ITEM NA Conditioner

ITEM PRI 450

INSERT UPDATE DELETE

ItemID	Item_Name	Item_Price
101	Vit.C serum	500
102	Vit.E serum	500
103	Hydrating serum	600
104	Anti-aging serum	800
105	Barrier-repair cream	550
106	Hydrating cream	450
107	Treatment toner	400
108	Ricewater toner	500
109	Mineral sunscreen	350
110	Form cleanser	350
111	Anti-tan facewash	450
112	Shampoo	450
113	Conditioner	450
114	Body wash	500

This form is design to store and manage the products that salon sell. This form store name of the product(item) also how much that product cost and store it into database.

9. Records Page:

The 'records' application window displays a summary of financial data for month 4, 2025. The summary includes:

- TOTAL INCOME: 106000.00
- SALARY: 94000.00
- EXPENSE: 850.00
- PROFIT: 11150.00

Below the summary, there are three tables:

Income_ID	Income	Type
1	10850	service
2	4000	service
3	7900	service
4	6600	service
5	6900	service
6	4500	service
7	5000	service
8	850	service
9	850	service
10	3300	service

First_Name	Last_Name	Salary
Kavya	Kumari	8000
Susan	Connor	9000
Noah	Roger	10000
Vinla	Devi	11000
Myra	Verna	12000
Aditi	Goyal	7000
Isha	Goyal	10000
Kartik	Kumar	11000
Kashvi	Jain	7000
Indira	Shama	9000

ID	Expense	Quantity
1	Shampoo	4

A 'Profit Status' message box is displayed, stating: "Congratulations! You are in profit this month."

This form gather all the information like income, employee's salary and expenses as per month in order to calculate the profit by selecting the month and year.

10. Expenses Page:

The 'expenses' application window displays a form to enter expense details. The form includes:

- EXPEN: Vit.E serum
- PRIC: 500
- QUANTI: 3
- TOTAL_AMO: 1500

Buttons for INSERT, UPDATE, and DELETE are available. A table of existing expenses is also displayed:

ID	Expense	Price	Q
2	Conditioner	350	3
3	Vit.C serum	500	3
4	Vit.E serum	500	3
5	Hydrating serum	600	2
6	Anti-aging serum	800	2
7	Barrier-repair seru...	550	3
8	Hydrating cream	450	3
9	Treatment toner	400	2
10	Ricewater toner	500	2
11	Mineral sunscreen	350	3
12	Form cleanser	350	3
13	Anti-tan facewash	450	2
14	Shampoo	450	3
15	Towels	200	5

This form is designed to enter all expenses(products to use at salon) and also to manage them.

Coding of any 3-4 important forms

1. Client Page:

```
Private Sub clientpage_Load(sender As Object, e As EventArgs) Handles MyBase.Load
    LoadDgvclient()

Conclusion/Challenges/Future Work

Conclusion:

The Glam Studio-Salon Management System effectively offers a straightforward and efficient way to manage a salon's day-to-day operations. It automates all necessary tasks and eliminates the need for manual paperwork with features including client registration, appointment scheduling, service tracking, employee administration, and billing. The desktop program has admin-level options for more advanced data management and is user-friendly and designed with receptionists in mind. By consolidating salon operations into a single software program, Glam Studio contributes to better client service, increased productivity, and well-organized documentation.

Challenges:

- Creating an interface that is simple enough for non-technical employees, such as receptionists, to use.
- Coordinating connections between modules, for as assigning staff and clients to services.
- Ensuring precise data validation for stock changes, billing, and appointments.
- Keeping track of the goods and supplies used in services.
- Putting in place appropriate access control so that administrators can make modifications and receptionists have restricted access.
- Data loss of prior services for clients who return at the moment, a client's past service history is not preserved when they return. This makes it more difficult to monitor service frequency or preferences. This is a significant flaw that we found.

Future Work:

- Include client service history tracking so that past appointments and services are recorded and accessible each time a client returns.
- Put in place a method to notify customers of appointments and low product inventory.
- Implement sophisticated reporting tools to gain a deeper understanding of company expansion.
- To avoid data loss, activate data backup functionality.
- Create a mobile version for management while on the go.
- In the future, incorporate online booking so that customers can schedule appointments on their own.
